[Hiring Manager Name]

[Company Name]

[Company Address]

| Application: Artificial Intelligence Specialist / AI Engineer

Dear Hiring Manager,

I am writing to apply for the **Artificial Intelligence Specialist** position at [Company Name]. As a Discover Graduate Trainee at **Vodacom Financial Services** with a **BSc in Mathematics and Physics**, and as the founder of two production AI products — **KasiKash** and **CAPS AI Tutor** — I combine formal quantitative training with hands-on **Generative AI, LLMOps, NLP, and Conversational AI** delivery on **AWS Bedrock, Anthropic Claude, and Google Vertex AI**. I would welcome the opportunity to bring that blend to your team.

My most direct AI experience sits in the products I have built end-to-end. On **CAPS AI Tutor**, I engineered an LLM-powered tutoring agent on **AWS Bedrock using Claude**, applied **prompt engineering and RAG-style grounding** against South African CAPS curriculum content, and shipped the assistant through **WhatsApp and USSD** so learners on feature phones and low-bandwidth networks can access it. On **KasiKash**, I built a voice-first, multilingual financial assistant (English, isiZulu, Sesotho) that turns spoken transactions into structured bookkeeping records, and designed **KasiScore**, an alternative credit-scoring engine over township SME transaction data.

Alongside these products, my role at Vodacom Financial Services has trained me to operate in a regulated, executive-facing environment. I deliver analytics and reporting to senior leadership across **Risk Management, Technology Assurance, Service Management, and AWS Cost Optimization**, and I automate reporting workflows with Python and advanced Excel. This means I bring not only AI engineering skills but also the governance, stakeholder, and cloud-cost awareness that production AI systems demand.

I am particularly drawn to [Company Name] because of your focus on [specific product/team/mission — e.g. building customer-facing AI, enterprise LLM platforms, applied research], and I would relish the opportunity to contribute my cloud, LLM, and full-stack skills to that work. I have attached my CV and a link to my project repository, and I would be delighted to walk you through KasiKash and the CAPS AI Tutor in an interview.

Thank you for your time and consideration.

Kind regards,

Sinethemba Mvelase
