[Hiring Manager Name]

[Team / Department]

[Company Name]

| Application: Software Developer

Dear Hiring Manager,

I am writing to apply for the **Software Developer** position at [Company Name]. I am a full-stack developer with a **BSc in Mathematics and Physics** who has shipped real, production software end-to-end — most notably **KasiKash**, a live AI-powered financial platform you can try right now at kasikash.com. I would love to bring that build-and-ship mindset to your engineering team.

I work comfortably across the whole stack. On the front end I build with **React, TypeScript, Vite, and Tailwind CSS**; on the back end I write **Node.js / Express** services backed by **PostgreSQL, Prisma, and Redis**, with **Socket.IO** for real-time features and **JWT** for secure authentication. I deploy through **GitHub Actions CI/CD** to **Vercel and Render**. On KasiKash I designed the database schema, built the voice-driven data-capture flow using the Web Speech API, and shipped features that real township businesses use to manage their money.

Beyond my own products, I built an **enterprise delivery-management platform** with live driver tracking, cash-on-delivery verification, dispatch management, and background job processing — a solid exercise in real-time systems, data modelling, and reliable backend engineering. In my day role at **Vodacom Financial Services**, I build automation tooling and collaborate with engineers and stakeholders to turn requirements into working software.

I am drawn to [Company Name] because of [specific product, tech stack, or mission — e.g. your work on X, your engineering culture, the problems your team solves], and I am eager to keep growing as an engineer on a team that ships. My CV and a link to my live work (kasikash.com) are attached, and I would welcome the chance to walk you through the code.

Thank you for your time and consideration.

Kind regards,

Sinethemba Mvelase
