Hiring Team

c/o Salt Recruitment

[Client — AI-First Technology Company]

| Application: AI Engineer / Founding AI Engineer (Architect · Engineer · Product Owner)

Dear Hiring Team,

I am applying for the AI-focused engineer role you are recruiting on behalf of your client. This is exactly the kind of position I have effectively been doing on my own products: acting as **architect, engineer, and product owner** — taking an idea, designing the AI architecture, building it full-stack, shipping it, and improving it in production. My live platform, kasikash.com, is proof I can do this end-to-end with no product manager writing specs.

My engineering profile maps closely to your requirements. I build **full-stack with Node.js/Express and React/TypeScript**, backed by PostgreSQL, Prisma, Redis, and Socket.IO for real-time systems, with clean **API design and pragmatic architecture**. On the AI side I ship **production LLM applications**: my **CAPS AI Tutor** is a conversational **AI agent on AWS Bedrock (Claude)** using **prompt engineering** and RAG-style grounding, integrated with **third-party channels (WhatsApp, USSD)** — the same integration muscle your CRM/third-party work needs. I deploy through **CI/CD on AWS and GCP**, and I am comfortable adopting **workflow-automation platforms such as n8n** quickly.

I also bring real business context. At **Vodacom Financial Services** I work directly with operational and executive stakeholders, translating business problems into tooling and automation — so I can hold a conversation about ROI and adoption, not just code. My **enterprise delivery-management platform** (a logistics/marketplace build for Takealot drivers) speaks to your "logistics or marketplace" nice-to-have, and my founder experience covers the "startup / founding engineer" preference.

I genuinely enjoy ambiguity and working independently, and I am excited by a mandate to **drive AI transformation across teams** rather than bolt features onto legacy products. I would welcome the chance to walk you (and your client) through kasikash.com and my architecture decisions. My CV is attached.

Thank you for your time and consideration.

Kind regards,

Sinethemba Mvelase
