

# SINETHEMBA MVELASE

Predictive Analytics & Data Science | Statistical & Causal Modelling | Customer Operations Insights

Johannesburg / Cape Town, South Africa • thegoatzeldris70@gmail.com • +27 72 411 0997

Live Project: [kasikash.com](https://kasikash.com) • GitHub: [github.com/snerantie](https://github.com/snerantie)

## PROFESSIONAL SUMMARY

Analytical data scientist and **predictive-analytics practitioner** with a **BSc in Mathematics and Physics**, currently embedded inside the Vodacom Group as a **Discover Graduate Trainee at Vodacom Financial Services**. Combines rigorous training in **statistics, regression, and mathematical modelling** with hands-on delivery in **Python, SQL, machine learning, big-data tooling, and executive reporting**. Experienced in translating complex data into **board-ready narratives** for senior leadership across Risk Management, Technology Assurance, and Commercial functions — quantifying the relationship between **operational drivers, cost (OPEX), and performance KPIs**. Applies **causal and multivariate modelling, forecasting, and clustering**, and integrates **Generative AI** to drive efficiency and customer-experience insight.

As an internal Vodacom candidate with a strong quantitative foundation, I am eager to grow into the **Senior Specialist Predictive Analytics** role — partnering with Customer Operations, Finance, and Executive Leadership to model demand for customer engagements and support the **Ask Once** ambition.

## CORE COMPETENCIES (MAPPED TO ROLE)

- Predictive & Causal Modelling:** Linear & Multivariate Regression • Sensitivity Analysis • Time-Series Forecasting • Scenario Planning • Clustering / k-means Segmentation • Factor Analysis
- Statistical Analysis:** Probability • Hypothesis Testing • Inference • Optimization • Pattern Analysis • Correlation & Benchmarking
- Programming & Big Data:** Python (pandas, NumPy, scikit-learn) • SQL • PySpark • Spark / Hadoop concepts • NoSQL • ETL & Data Modelling
- Data Visualisation & BI:** Power BI • QlikSense (working knowledge) • Python viz (matplotlib, seaborn) • Executive Dashboards • Data Storytelling
- Cloud & Data Platforms:** AWS • Google Cloud Platform • BigQuery • Vertex AI • Teradata / CDW concepts • Big Data Platform extraction
- AI Capabilities:** Generative AI • LLMs (AWS Bedrock, Claude) • NLP • ML-driven automation for service efficiency & CX
- Customer Operations Domain:** KPI Analysis (FCR, NPS, AHT, Repeat Contacts, Volume) • Cost-to-Serve / OPEX awareness • Digital-adoption & human-to-digital care trends
- Business & Delivery:** Board-Level Narratives • Stakeholder Management • Presentation & Report Writing • Agile • ITIL 4

## TECHNICAL SKILLS MATRIX

| Domain                | Tools & Techniques                                                                      | Proficiency                              |
|-----------------------|-----------------------------------------------------------------------------------------|------------------------------------------|
| Statistical Modelling | Regression (linear/multivariate), Forecasting, Sensitivity Analysis, Hypothesis Testing | Advanced                                 |
| Machine Learning      | Clustering / k-means, Classification, Factor Analysis, Model Evaluation                 | Intermediate–Advanced                    |
| Python & Big Data     | pandas, NumPy, scikit-learn, PySpark, Spark/Hadoop concepts                             | Advanced (Python); Working (PySpark)     |
| SQL & Data Platforms  | SQL, BigQuery, Teradata/CDW concepts, NoSQL                                             | Advanced (SQL)                           |
| Visualisation & BI    | Power BI, QlikSense, Python viz libraries                                               | Advanced (Power BI); Working (QlikSense) |
| Cloud                 | AWS, GCP, BigQuery, Vertex AI                                                           | Intermediate–Advanced                    |
| Generative AI         | AWS Bedrock, Claude, LLM/NLP applications                                               | Intermediate                             |
| Domain KPIs           | FCR, NPS, AHT, OPEX, Cost-to-Serve, Demand Drivers                                      | Foundational–Intermediate                |

## PROFESSIONAL EXPERIENCE

- Discover Graduate Trainee — Technology Management & Analytics**  
**Vodacom Financial Services — Johannesburg, South Africa (Vodacom Group)**

Feb 2025 – Present

  - Deliver **quantitative analysis and executive insight** to senior leadership, drafting narratives that explain **movement in KPIs** and their impact on efficiency and cost — directly analogous to the board-level reporting this role requires.
  - Support **Risk Management, Technology Assurance, and AWS Cost Optimization**, analysing operational and cost (OPEX) datasets to identify variance drivers and quantify cause-and-effect relationships.
  - Build **dashboards and analytical reports** consumed at Steering and Management Committees, promoting data-driven decision-making across business units.
  - Automate reporting and analysis workflows using **Python and advanced Excel**, consolidating metrics from multiple business areas — aligned to automating monitoring with Big Data / MIS teams.
  - Collaborate cross-functionally (Finance, Technology, Operations) to source data and translate business questions into analytical models.
- Reporting Analyst Intern**  
**Vodacom Financial Services — Johannesburg, South Africa**

Jun 2024 – Jan 2025

  - Built **Power BI dashboards** and automated Excel reporting tracking performance KPIs across channels.
  - Performed **data extraction, cleaning, transformation, and correlation/benchmarking** of metrics for business-performance reporting.
  - Delivered recurring insight packs, converting raw data into decisions for management review.
- Data Scientist (Project-Based Engagement)**  
**Vodafone Portugal — Data Science Project (Vodafone Group)**

Cross-Border

  - Extracted **large, complex datasets** from **Google BigQuery** and performed complex **exploratory data analysis (EDA)** on GCP.
  - Applied **statistical and machine-learning techniques** (regression, classification, clustering, model evaluation) via Vertex AI to generate business insights and recommendations.

- Directly relevant experience working high-volume data within the Vodafone/Vodacom group context.

KEY STRENGTHS

- **Internal Vodacom candidate** with group context and financial-services exposure.
- Strong statistical foundation (BSc Maths & Physics) applied to real business data.
- Python, SQL, and PySpark for high-volume data manipulation and modelling.
- Executive storytelling — drafting KPI narratives for senior leadership.
- Generative AI fluency relevant to CX and service-efficiency transformation.

LANGUAGES

- English — Professional
- isiZulu — Native
- Sesotho — Conversational
