Talent Acquisition Team

Customer Operations — Commercial Operations

Vodacom (Pty) Ltd — Century City, Cape Town / Midrand, Johannesburg

| Application: Senior Specialist Predictive Analytics (G Band Lower) — Customer Operations

Dear Hiring Team,

I am writing to express my interest in the **Senior Specialist Predictive Analytics** role within Customer Operations. As an existing member of the Vodacom Group — currently a **Discover Graduate Trainee at Vodacom Financial Services** — with a **BSc in Mathematics and Physics** and hands-on data-science delivery, I am deeply motivated by the opportunity to help Commercial Operations model demand for customer engagements and advance the **Ask Once** ambition.

The role's technical core maps closely to how I already work. I apply **statistical and multivariate modelling** (regression, sensitivity analysis, forecasting, and clustering), build models in **Python and SQL**, and conduct complex **exploratory data analysis** — including on large group datasets extracted from **Google BigQuery** during a Vodafone Portugal engagement. I am building depth in **PySpark and big-data platforms** for high-volume analysis, and I visualise insights in **Power BI** (and am extending into QlikSense). I also work with **Generative AI** (AWS Bedrock, Claude) and understand first-hand how AI is shifting service from human to digital care.

Just as importantly, I already operate in an executive, KPI-driven Vodacom environment. I draft **insight narratives for senior leadership**, analyse operational and cost (OPEX) data across Risk Management, Technology Assurance, and AWS Cost Optimization, and translate complex analysis into clear stories that inform decisions. I am keen to apply this to Customer Operations metrics such as **FCR, NPS, AHT, repeat contacts, volume, and cost-to-serve**, and to quantify how price changes, base growth, digital adoption, and technology outages drive service demand.

I want to be transparent that I am early in my career and would be growing into the full seniority of this position; what I offer is a strong quantitative foundation, genuine Vodacom group context, demonstrable modelling ability (including a live predictive product at kasikash.com), and a real hunger to develop into the contact-centre and service-economics depth the role demands. I would greatly value the opportunity to discuss how I can contribute and learn within the team.

Thank you for your time and consideration.

Kind regards,

Sinethemba Mvelase
