Hiring Team

Information Technology

Goodwill Industries of South Florida

| Application: IT Project Manager — Digital Transformation & AI

Dear Hiring Team,

I am applying for the **IT Project Manager** role at Goodwill Industries of South Florida. What excites me most is the blend at the heart of this position: **disciplined project delivery** paired with **digital transformation and emerging AI**. That is precisely where I have been building my career — I am **ITIL 4 certified**, I support project governance and delivery inside a large enterprise, and I have hands-on experience implementing AI platforms such as **Anthropic Claude**.

As a Technology Management trainee at **Vodacom Financial Services**, I work day-to-day with the building blocks of this role: partnering with business and IT stakeholders across **PI Delivery, Steering Committees, and Management Committees**; helping define scope and deliverables; tracking milestones; and **communicating status and expectations** through executive reports and presentations. I use **Power BI** to track performance and outcomes, apply **ITIL 4** practices, and support **risk, assurance, and governance** activities — all directly aligned to delivering projects on time and within scope while maintaining data and governance standards.

On the innovation side, I actively identify and deliver **AI and automation** opportunities. I evaluate Generative AI use cases for efficiency at Vodacom, and I have personally built and deployed enterprise-style AI solutions — including a conversational assistant on **Anthropic Claude** adopted by real users, and a live platform at kasikash.com that I owned from idea to production. This gives me genuine empathy for both the technical delivery and the **change-management and user-adoption** challenges of rolling out AI, and I would relish collaborating with your **AI Steering Committee and AI Champions** to align projects with enterprise strategy.

In the interest of transparency, I am early in my career and would be stepping up into the full project-lead scope of this role; what I offer is strong delivery-governance grounding, real AI implementation experience, excellent stakeholder communication, and a genuine drive to help Goodwill advance its mission through technology. I would welcome the opportunity to discuss how I can contribute. (I am based in South Africa and open to relocation or remote arrangements, and happy to discuss work-authorization logistics.)

Thank you for your time and consideration.

Kind regards,

Sinethemba Mvelase
